Due to how simple it is to use, even DIY junkies and weekend project fighters can pick it up in a flash, without worrying about reading complicated instructions. This means that these small domestic-scale projects can not only begin but finish on time, as the tedious and repetitive nature of measuring materials and angles, which usually slow you down, can be done with an angleizer. Beyond that, artisan, carpentry, and Soft alike find it one of those useful tools that once you have it in your arsenal, you don't want to forget it at work. What is the Angleizer mold tool for Strongman Tools' heavy-ended alloy? Simply put, the angle is an angle measuring bar that uses premium aluminum industrial grade. This means that it does not heal or break and is incredibly durable. It's versatile, in that it can be easily adjusted with the four screw screws it comes with. To adjust, simply release the metal handles, adjust the ruler to the angle or shape you want, and then tighten and locate. It comes with a lifetime warranty, free instructions, a builder's pencil, and a free carrying case. It can be used to create direct angles on material like tiles, laminate, slate, bricks, and wood. It can create and measure angles to arches, algae and joints, as well as many others. It is very easy to use and is recommended by home improvement enthusiasts, roofers, tilers, bricks, carpenters, builders, and plumbers. The dimensions of the mold tool are 12.1 x 2.1 when folded and 10 x 5 inches when completely unfolded. It only comes in one color, black. Tips for using Strongman Tools' Angleizer positions the angle on the material you measure first to get an idea of how you'll have to go about getting the right angle. From there, adjust each metal handle one at a time, until you get an angleizer into the correct shape and size for measuring. Then place the angle in place, and take the builder's pencil to leave its mark. Cut accordingly. Whenever you're going to use an angleizer, be sure to double-check if you need it to be inches or legs. Although generally, if you're just doing a measuring line for cutting purposes, you'll be fine but for more complicated cuts, you want to be using the right form of measurement. Although Strongman Tools' heavy aluminum angleizer is made of aluminum alloy and incredibly durable, you'll need to fold it when set aside. It's just to reduce the wear and tear it gets when stored in a toolbox. As with any ruler, make sure that when measuring the length or width of your materials, the ruler is placed directly at the level and length of the material. Any type of appearance or language will make your measurement inaccurate. This is especially true for complicated measurements. When you follow the measurement line with the builder's pencil, you usually want to allow the inside of the angle. Because the angle is a custom stencil, always check the angles you're replicating again because the slot rulers will need to be manually adjusted if you're off by a centimeter or two. Make sure that once you have the right measurement, tighten the metal handles as tightly as you can. This is simply that the tool does not come with a locking feature, so if the metal handles are not fastened well enough, the measurement can be accidentally tilted. However, it doesn't have to be tedious work and you can even do it for fun to change the look of the bathroom, it's how easy a heavy duty angeiser of the Strongman tool makes cutting and measuring tiles. Using the angleizer tool, you save a lot of time on measuring these embarrassing tile cuts as you don't have to deal with inaccurate measurements. Why customers love our angle! Strongman Tools' heavy duty aluminum angleiser is well worth buying as it is incredibly cheap and has hundreds of uses. What makes this product better than others on the market is the fact that it is made of aluminum, as the yellow plastic ones you see from competitors tend to be thin and break after a few months. This one has a sturdy, durable design, comes sent well and all the numbers are blazer into the product so they are easy to read. It comes just as advertised and will measure every angle in existence, and yes, it becomes a square! The only complaints customers have had with this tool in particular is the fact The metal handles of the rulers do not lock in place. This means that you have to be very careful with moving an angle over on the material you are cutting. However, there is an easy fix for this which I found to be as easy tightening as tight metal handles as possible. Usually it will work well if you don't knock the angleizer out of anything or don't hold it too tightly when moving the angle. Other customers have found that this is a fairly affordable tool that comes with many applications and is rough in its construction. Many bought it as a gift or a gift to their loved ones, who absolutely loved it. So it makes a great gift for all DIYers, carpenters, craftsmen. Some users found that their product came in faulty packaging, however, it is slightly and far between as it depends on the individual seller. Apart from that, only other complaints found were that some of the boxes did not come with a level in them, which some users were under the impression that one was. Some users won't get the carry-on bag he's supposed to be with. Overall, angleizer is a durable and versatile tool that allows you to save some money on useful jobs that need to be done around your home, office or parent home. Repair and maintenance should not be an arduous task nor should it be expensive if you know where to get the recycled materials you need. With angleizer, you can speed up and follow all the projects in the house and make them fun again, as hours of measurement will no longer be required just to get the right shape, fit, cut, or design.
